
Environmental Policy

As a provider of various Internet platform services, we at NAVER strive to fulfill our duties of sustainable management and social responsibility with regard to protecting the environment, creating social values, and promoting transparent corporate governance.

NAVER has established and implemented environmental policies that contribute to minimizing the environmental impacts that we cause. By doing so, NAVER is actively responding to the environment-related demands of stakeholders such as our shareholders, users, and partners and thus working together with everyone to further spread the value of environmentally friendly policies in our society.

NAVER's environmental policy applies to all stakeholders surrounding our business, including our employees, subsidiaries, supply chain, and partners. In addition, we strive to deliver the value of our environmental management to our users and customers.

Environmental Management System

- We comply with environmental laws.
- In accordance with ISO 14001 and other certified environmental management methodologies, we regularly analyze the environmental impact (greenhouse gas, energy, water, waste, etc.) of company activities and carry out improvement activities every year.

Proactive Effort to Mitigate Climate Change Risks

- We actively utilize technologies that reduce our environmental impacts— including those pertaining to greenhouse gas, energy, water, and waste—at corporate buildings such as our offices and IDCs. On top of this, we're actively developing and implementing operational policies that can reduce our environmental impact after construction.
- We actively evaluate the use of renewable energy and make use of it through methods such as the Power Purchase Agreement (PPA) to reduce greenhouse gas emissions generated by our buildings.
- Transportation methods used by our company will be gradually converted to electric vehicles (EV) to reduce greenhouse gas emissions from our operations.
- We actively participate in environmental initiatives that our company has signed up for, such as RE100, EV100, and CDP, and actively review and implement the recommendations from these initiatives.

Promoting Environmentally Friendly Values in the Supply Chain

- We apply environmentally friendly practices throughout our investments, including procurement, and strive to promote environmentally friendly management among our partners.
- In addition, we carry out activities that can enhance the ESG management capabilities of our partners, such as greenhouse gas emission assessments and environmental education.

Expanding the Social Impact of Environmentally Friendly Values

- NAVER continuously endeavor to implement environmentally friendly values in our services and striving to promote an environmentally friendly lifestyle in our society.
- We will ensure that the users of NAVER services can effectively receive environmental information (anniversaries, environmental information, etc.) and the information of major environmental organizations.

Conserving Biodiversity

- NAVER collaborates with major environmental groups and organizations to help the users of NAVER services in gaining a better understanding and awareness on ecology and biodiversity.
- When carrying out activities that affect the ecology, such as corporate building constructions, we analyze the environmental impact of our activities in advance and strive to minimize the negative impacts.

The ESG department of NAVER performs its duties and tasks in accordance with NAVER's environmental policy, and the ESG Committee under the Board of Directors review and makes key decisions related to environmental management.
